ABSTRACT OF THE DISCLOSURE

The invention relates to a system and method for providing information about an entity. The entity may be a business or service. Information about the entity can be

5   determined by processing any attributes known about the entity, such as a phone number, business name, address. For example, information, such as an internet address of a business can be determined from a known attribute, such as a phone number of the business. With the phone number of the business, a number of potential internet addresses for that business may be determined. A single address, which is likely to be

10   that of the business, can be determined by processing the potential addresses using a computational analysis.
